

# User URL Flow

**Users:** URL Flow begins at the index (home page), then progresses to a registration form if the user chooses. A login form is available if the user already has an account. As a member, users can browse posts, create new posts, comment and vote for stories. They can also adapt any stories they like and display the steps in their profile page.

A guest only has a fraction of these features, but both are able to send a message to admins for inquiries.

## Legend

# Admin URL Flow

**Admins:** Admins must start at the index page like any other user, but their special login information gives them access to all user features in addition to special administration features. Admins can modify and delete any comments, posts or users they feel are disruptive to the app.

In addition to this, admins have a special inbox that holds inquiries from users and guests.
